

# Contents

*Preface*

*v*

## **1. Soil and its Formation** **1–19**

---

- Introduction 1
- Origin of Soil 3
- Sedimentary Rocks 4
  - Processes 5
  - Origin of Sedimentary Material 5
  - Minerals of Sedimentary Rocks 6
  - Classification of Sedimentary Rocks 6
  - Abundance of Sedimentary Rocks 7
  - Sedimentary Structures 7
- Weathering 8
- Types of Weathering 10
  - Mechanical Weathering 10
  - Pressure Release 11
  - Hydraulic Action 11
  - Salt-crystal Growth 12
  - Chemical Weathering 12
  - Biotic Weathering 15
- Weathering and Soil 16
- Gradation 16
  - Degradation 16
  - Aggradation 16
- Soil and its Formation 17
  - Factors of Soil Formation 17
  - Soil Profile 19

## **2. Components of Soil** **20–47**

---

- Introduction 20
- Plant Available Forms of Essential Elements 20
  - Soil Colloids 22
  - Soil Solution 26
- Nitrogen 27
  - Nitrogen in the Plant 27
  - Nitrogen Forms 28
  - Immobilisation and Mineralisation of Soil Nitrogen 29
  - Losses of Nitrogen 33

- Phosphorus 33
  - Phosphorus in the Plant 33
  - Phosphorus in the Soil 34
  - Factors Affecting Availability 35
  - Phosphorous and the Environment 36
- Potassium 36
  - Potassium in the Plant 36
  - Potassium in the Soil 37
- Secondary Nutrients 38
  - Calcium in the Plant 38
  - Magnesium in the Plant 38
  - Behaviour of Calcium and Magnesium in the Soil 38
  - Sulphur in the Plant 39
  - Behaviour of Sulphur in the Soil 39
  - Sources of Ca, Mg and S 39
- Micronutrients 39
  - Manganese (Mn) 39
  - Zinc (Zn) 41
  - Copper (Cu) 42
  - Iron (Fe) 44
  - Boron (B) 44
  - Chlorine (Cl) 46
  - Molybdenum (Mo) 46

**3. Soil Acidity and Alkalinity** **48–54**

---

- Introduction 48
- Soil pH 48
- Soil Acidity 48
- Benefits of Liming 49
- Nutrient Availability and pH 50
- How Lime Neutralises Acid Soils 50
- Liming Materials and Chemical Composition 51
  - Fineness of Grind 52
- Lime Requirements and Application Rates 52
  - Managing Lime Applications 53
  - Overliming 54

**4. Soil Erosion** **55–66**

---

- Introduction 55
- Causes of Soil Erosion 56
  - Water Erosion 57
- Shoreline 58
  - Wind Erosion 59
  - Thermal Erosion 60
- Soil Erosion and Climate Change 60

---

Deforestation	60	
Causes of Deforestation	61	
Environmental Problems	61	
Land Degradation	63	
Causes of Land Degradation	64	
Soil Erosion Prevention	65	
<b>5. Oxisols, Utisols and Vertisols</b>		<b>67–96</b>
<hr/>		
Introduction	67	
Formation of Oxisol	68	
Pedogenic Processes	69	
Ferallitisation/Laterisation	71	
Generalised Profile Properties and Uses	71	
Properties of Oxisol	71	
Uses of Oxisol	71	
Suborders	72	
Ultisol	73	
Suborders	73	
Soil Orders	74	
Soil Pedogenesis	76	
Uses of Ultisols	78	
Classification of Ultisols	79	
Soil Production Function	80	
Vertisols	81	
Regional Distribution of Vertisols	82	
Associations with Other Reference Soil Groups	84	
Genesis of Vertisols	85	
Characteristics of Vertisols	90	
Management and Use of Vertisols	91	
Main Production Constraints	94	
Tackling Salinity in Indian Vertisols for Food Security	94	
Summary Description of Vertisols	95	
<b>6. Soil as a Component of Ecosystem</b>		<b>97–118</b>
<hr/>		
Introduction	97	
Soil Creation	98	
Biological Contribution	103	
Humus	104	
Carbon Cycle	111	
Soil Minerals	112	
Plants	114	
Summary	118	
<b>7. Soil Contamination</b>		<b>119–132</b>
<hr/>		
Introduction	119	
Sources of Soil Contamination	119	

Chemical Nature of Soil Contaminants 121  
Important Environmental Properties of Soils 122  
Important Environmental Properties of Soil Contaminants 125  
Distribution of Soil Contaminants 127  
    Soil/Water Partition Process 128  
    Soil/Organism Process 130  
Ecological and Health Effects of Soil Contamination 131

**8. Engineering Aspects of Soil Pollution and its Control** **133–181**

---

Introduction 133  
Structure and Composition of Soil 133  
Changes to the Soil through Specific Types of Land Use 135  
Anthropogenic Pollutant Damage 136  
    Acidic Damage and its Chemical Consequences for the Soil 136  
    Deposition of Heavy Metals and their Availability for Plants 137  
    Deposition of Pesticides and their Behaviour 138  
    Pollutant Deposition with Sewage Sludge 140  
    Significance of Deicing Salts for the Soil Structure 140  
Soils as a Part of Landscapes and Living Habitats 141  
Solid Phase Characteristics 142  
Flow of Fluid in Fully Saturated Media 144  
Flow of Fluid in a Partially Saturated Media 152  
Contaminant Transport in Soils 157  
    First Zone of Contamination—NAPL Residual in the Vadose Zone 158  
    Second Zone of Contamination—Contaminant Vapours in Vadose Zone 161  
    Third Zone of Contamination—NAPL Residual in Initially Water-saturated Zone 163  
    Fourth Zone of Contamination—Dissolved Contaminant in Subsurface Water 164  
    Natural Attenuation of Contaminants in Soils 168  
Remediation of Contaminated Soils 170  
Removal Options for Soil Remediation 171  
    Incineration 171  
    Landfilling 172  
    Stabilisation/Solidification 173  
    *Ex Situ* Bioremediation 173  
*In Situ* Soil Remediation Processes 174  
    Pump and Treat Extraction of Contaminated Groundwater 174  
    Enhancement of Pump and Treat Processes 177  
    Vacuum Extraction in the Unsaturated Zone 178  
    *In Situ* Bioremediation of Soils 180

**9. Soil Covers** **182–191**

---

Introduction 182  
Characteristics of Soil Cover 183  
Cover Crops 184  
    Choose the Right Cover Crop 184

---

Seed Supply	184
Seed Treatment	185
When to Plant Cover Crops	86
How to Plant Cover Crops	186
Controlling Pests and Diseases	186
Harvesting and Seed Storage	187
Preparing to Plant the Main Crop	187
Using Cover Crops for Food and Feed	188
Mulch	188
Mulch from a Cover Crop	188
Mulch from Crop Residues	189
Mulch from Trees and Shrubs	189
Mulch from Other Plant Materials	190
Challenges for Maintaining Soil Cover	190
Semi-arid Areas	190
Diseases and Pests	190
Rats	190
Termites	191
Fire	191
Livestock	191
Information	191
<b>10. Sewage Sludge</b>	<b>192–218</b>
Introduction	192
Characteristics of Domestic Sewage	192
Organic Matter	192
Nitrogen and Phosphorus	192
Suspended Solids	193
Dissolved Oxygen	193
Bacterial Parameter (Fecal Coliform)	193
Effect of Sewage Pollution on Surface Water Bodies	194
Organic Pollution	194
Effect of Nutrients	194
Effect of High Dissolved Solids (TDS)	195
Effect of Toxic Pollutants on Water Quality	195
Ecological Health	196
Health Dimension of Sewage (Polluted Water)	196
Water-borne Diseases	196
Water-based Diseases	197
Water-related Vector Diseases	197
Water-scarce Diseases	199
Technological Options for Treatment of Municipal Waste-water	199
Conventional Waste-water Treatment	200
Options for Adoption of New Treatment Methods	201

Upflow Anaerobic Sludge Blanket (UASB)	201
Two-Stage, Aerobic Unitank System (TSU-System)	202
Root Zone Treatment	203
Land Treatment for Waste Management	203
Sewage Utilisation	203
Land Application of Waste-water	203
Use of Sewage in Pisciculture	204
Sewage Utilisation in Forestry	205
Use of Vermiculture for Waste Management	205
Decentralised Small Scale Treatment Systems	205
Collection, Conveyance and Design of Sewage	207
Systems for Collection, Conveyance and Disposal	207
Presence of Particles	208
Conservancy System	208
Presence of Solid Matter	208
Pressure	208
Minimum and Maximum Velocities	209
Water Carriage System	210
Sludge as Fertiliser	211
Metal Content of Sludges	212
Pathogens in Sludge	214
Sludge Treatment, Reuse and Disposal	215
Stabilisation	216
Composting	216
Anaerobic Digestion	217

## **11. Biodiversity of Soil Fungi**

**219–242**

---

Introduction	219
Need for Fungal Biodiversity Studies	219
Role of Fungi	219
The Number Game	220
Fungal Systematics	220
Functional Diversity	220
Techniques for Studying Fungal Diversity	220
Primary Methods	220
Advanced Techniques	221
Fungal Diversity Studies Around the Globe	222
Diversity of Soil Fungi	222
Ecological Aspects of Fungal Diversity	224
Species Richness and Diversity in Agricultural Environments	228
Comparison of Biodiversity Assessed by Culture-Based and Molecular Techniques	231
Species Richness and Diversity in Nonagricultural Environments	231

---

Use of Fungi in Biodegradation	232
Acquisition, Care and Feeding of Fungi	233
Definitions and Distinctions	234
Fungal Way of Degradation	235
<i>Phanerochaete chrysosporium</i>	237
Wood Rots, Litter Rots and Other Filamentous Fungi	238
Mycoremediation	240
<b>12. <i>In Situ</i> Treatment Technologies</b>	<b>243–268</b>

---

Introduction	243
<i>In Situ</i> Biological Treatments	244
Bioventing	244
Enhanced Bioremediation	244
Landfarming	245
Natural Attenuation	246
Phytoremediation	247
<i>In Situ</i> Physical/Chemical Treatments	248
Electroreclamation	248
Soil Vapour Extraction	249
Lasagna™ Process	249
Fracturing	250
Solidification/Stabilisation	251
Soil Flushing	252
Polymer Adsorption	253
<i>In Situ</i> Thermal Treatments	253
Soil Vapour Extraction Thermally Enhanced	253
Vitrification	254
<i>In Situ</i> Soil Washing Using Integrated System of Remediation	254
Materials and Methods	255
<i>In Situ</i> Soil Washing Using Integrated System of Remediation Technologies	257
Result and Discussion	258
Fixing Additives for <i>In Situ</i> Remediation of Heavy Metal Contaminated Soils	259
Types and Availability of Fixing Additives	260
Assessment of the Fixation Treatment	263
Prospect	267

---

<b>13. <i>Ex Situ</i> Treatment Technologies</b>	<b>269–283</b>
--	----------------

---

Introduction	269
<i>Ex Situ</i> Biological Treatments	270
Biopiles	270
Bioreactors	270
Composting	271
Landfarming	272
<i>Ex Situ</i> Physical/Chemical Treatments	273
Chemical Extraction	273
Dehalogenation	273

- Separation 274
- Solar Detoxification 275
- Chemical Reduction/Oxidation 276
- Soil Washing 276
- Solidification/Stabilisation 277
- Soil Vapour Extraction 278
- Ex Situ* Thermal Treatments 278
  - Hot Gas Decontamination 278
  - Open Burning 279
  - Thermal Desorption 279
  - Plasma Arc 280
  - Incineration 281
  - Pyrolysis 282
  - Vitrification 282

**14. Bioremediation: A Review** **284–287**

---

- Introduction 284
- In Situ* Bioremediation of Soil 285
  - Bioventing 285
  - Injection of Hydrogen Peroxide 285
- In Situ* Bioremediation of Groundwater 286
- Ex Situ* Bioremediation of Soil 286
  - Slurry-phase Bioremediation 286
  - Solid-phase Bioremediation 286
  - Landfarming 286
  - Soil Biopiles 287
  - Composting 287
  - Where has it been Used 287

**15. Remediation of Metal-Contaminated Soils and Groundwater** **288–318**

---

- Introduction 288
- Sources of Contaminants 289
  - Airborne Sources 290
  - Process Solid Wastes 290
  - Sludges 290
  - Soils 290
  - Direct Groundwater Contamination 290
- Definitions of Contaminant Concentrations 291
- Chemical Fate and Mobility 291
  - Lead 293
  - Chromium 293
  - Arsenic 294
  - Zinc 294
  - Cadmium 294
  - Copper 295
  - Mercury 295

---

Influence of Soil Properties on Mobility 296	
Chemical Properties 296	
Physical Properties 296	
Available Technologies and Performance 297	
Site Characterisation and Establishment of Remediation Goals 297	
General Remediation Approaches 298	
Performance of Available Commercial Technologies 310	
Best Technology by Metal 315	
Cost Estimation 315	
Containment 315	
Solidification/Stabilisation 316	
Vitrification 316	
Soil Washing 316	
<i>In Situ</i> Soil Flushing 316	
Electrokinetic Treatment 316	
Regulatory/Policy Requirements and Issues 316	
Conclusion 318	
<b>16. Slurry Bioreactors for Bioremediation of Soils and Sediments</b>	<b>319–335</b>
<hr/>	
Introduction 319	
Process Fundamentals and Analysis of Advantages and Disadvantages of Slurry Bioreactors 320	
Process Description 320	
Soil Pretreatment 321	
Solids Concentration 321	
Mixing 321	
Control of Environmental Conditions in the Operation of Slurry Bioreactors 322	
Applications of Aerobic Slurry Bioreactors to Bioremediation of Soils Polluted with Pesticides, Organo-chlorinated Substances, Explosives and Polynuclear Aromatic Hydrocarbons 322	
Utilisation of Electron Acceptors Other than Oxygen 327	
Use of Surfactants and Solvents to Improve Availability of Contaminants 329	
Advances on Hysteresis Characterisation 329	
Surfactants 29	
Solvents 331	
Bioaugmentation and Advances on Characterisation and Monitoring of Microbial Communities of Slurry Bioreactors 332	
Developments on Ecotoxicity Assays Aimed at Evaluating Bioremediation Efficiency of the Process 333	
Conclusion 334	
<b>17. Remediation and Bioremediation of Uranium Contaminated Soil</b>	<b>336–347</b>
<hr/>	
Introduction 336	
Soil Washing 337	
Solidifications/Stabilisation 339	

<i>In Situ</i> Immobilisation 340	
Apatites 340	
Zeolites 342	
Chemical Reduction Treatments 342	
Bioremediation 343	
Bioleaching 343	
Phytoremediation 344	
<b>18. Biosurfactants and their Application for Soil Bioremediation</b>	<b>348–359</b>
Introduction 348	
Soil Bioremediation Methods 349	
Effect of Biosurfactants in Soil Bioremediation 354	
<b>19. Phytoremediation</b>	<b>360–383</b>
Introduction 360	
Application of Phytoremediation 360	
Advantages and Limitations of Phytoremediation 360	
Various Phytoremediation Processes 361	
Role of Genetics 363	
Hyperaccumulators and Biotic Interactions 364	
Phytoremediation of Hydrocarbon-contaminated Soils 364	
Phytoremediation Mechanisms 366	
Pilot Studies 373	
Field Scale Considerations 373	
Mathematical Modelling 379	
Rhizodegradation 381	
Regulatory Issues 381	
Emerging Ethical Issues, Opportunities and Challenges 382	
Conclusions 383	
<b>20. Restoration of Polluted Soils by Microbial and Enzymatic Processes</b>	<b>384–396</b>
Introduction 384	
Degradation of Organic Pollutants by Soil Micro-organisms 385	
Degradation of Organic Pollutants by Soil Enzymes 389	
Extracellular Enzymes as Agents for the Remediation of Polluted Soils 393	
<b>21. Role of Enzymes in Maintaining Soil Health</b>	<b>397–405</b>
Introduction 397	
Soil Enzymes 397	
Kind of Soil Enzymes 398	
Origin and State of Soil Enzymes 398	
Importance of Soil Enzymes 398	
Application of Soil Enzymes 398	
Soil Health 399	
Definition 399	
Aspects of Soil Health 399	

---

Interpretation of Soil Health	400
Pressures on Soil Health Towards Impacts	400
Indicators of Soil Health	401
Micro-organism as Indicators of Soil Health	401
Soil Enzymes as Indicators of Soil Health	401
Potential Roles of Soil Enzymes in Maintaining Soil Health	402
Amylase	402
Arylsulphatases	402
$\beta$ -Glucosidase	403
Cellulases	403
Chitinase	404
Dehydrogenase	404
Phosphatases	404
Proteases	405
Urease	405
Conclusion	405
<b>22. Microbial Enzyme-Catalysed Processes in Soils and their Analysis</b>	<b>406–411</b>
<hr/>	
Introduction	406
Microbial Processes in Soils Catalysed by Enzymes	406
Methodological Considerations for Measuring Enzyme Activities in Soils	407
Recommended Procedure	409
Enzyme Extraction and Measurement in Extracts	410
Other Methods Targeting Microbial Processes in Soils	411
<b>23. Landfilling Methods and Operations</b>	<b>412–436</b>
<hr/>	
Introduction	412
Operations	412
Impacts	413
Trash Dump Communities	413
Landfilling Methods and Operations	414
Occurrence of Gases and Leachate in Landfills	414
Landfilling of Hazardous Wastes	420
Landfilling Methods and Operation	421
Design of Hazardous Waste Landfills	421
Landfarming	422
Landfill Gas	424
Regional Practice	424
Reclaiming Materials	425
Alternatives	425
Landfills: Impacts on Groundwater	425
Concern Over Landfill Impacts	426
Bioreactor Landfill	428
Traditional Landfills and Associated Problems	428
Working of a Bioreactor Landfill	429

- Advantages of Bioreactor Landfills 429
- Disadvantages of Bioreactor Landfills 429
- Implementation of Bioreactor Landfills 430
- Landfill Mining 430
  - Practical Applications 430
  - Tools and Machinery 431
  - Mechanics of Mining 431
  - Operational Flow 31
- Land Reclamation 431
  - Habitation 432
  - Agriculture 432
  - Beach Restoration 432
  - Landfill 432
  - Environmental Impact 433
- Landfill Diversion 433
- Materials Recovery Facility 433
  - Clean MRF 433
  - Dirty MRF 434
- Mechanical Biological Treatment 434
  - Process 434
  - Mechanical Sorting 435
  - Biological Processing 435

**24. Leachate**

437–479

---

- Introduction 437
- Leachate has a Very High Ammoniacal Nitrogen Concentration 438
- Landfill Leachate 438
  - Composition of Landfill Leachate 438
  - Leachate Management 439
  - Goals of Leachate Collection Systems 439
  - Components of Leachate Collection Systems 439
  - Liners 439
  - Leachate Drainage System 440
  - Filters 440
  - Sumps 440
  - Membrane and Collection for Treatment 441
  - Re-injection into Landfill 441
  - Treatment 441
    - Removal to Sewer System 441
- Environmental Impact 442
- Problems and Failures 442
- Other Types of Leachate 443
- Nitrification of Landfill Leachate by Biofilm Columns 443
  - Nitrification 445
  - Comparison of Traditional Landfill, Leachate Recirculating Landfill and Bioreactor Landfill 447

---

Leachate Production and Characteristics	447
Trickling Filters	450
Methods and Materials	451
Results and Discussion	454
Electrochemical Oxidation of Landfill Leachate Treatment	469
Characteristics of Landfill Leachate	470
Electrochemical Oxidation of Landfill Leachate	471
<b>25. Nanotechnology for Soil Remediation</b>	<b>480–490</b>
<hr/>	
Introduction	480
Description of Nanoparticles Used in Site Remediation	481
Description of Nanomaterials with Potential Remediation Applications	484
Chemistry of Selected Nanoparticles	485
<i>In Situ</i> Application of Nanoparticles	486
Limitations	488
Fate, Transport and Toxicity Questions	489
Performance and Monitoring	490
<b>26. Soil Pollution from Industrial Waste and its Control</b>	<b>491–518</b>
<hr/>	
Introduction	491
Composition of Soil	492
Sources of Soil Pollution	492
Industrial Wastes	493
Soil Pollution by Urban Wastes	493
Radioactive Wastes	494
Agricultural Wastes	494
Chemical and Metallic Pollutants	495
Inorganic Toxic Substances	496
Organic Wastes	498
Organic Pesticides	498
Heavy Metal Pollutants	499
Waste-water Added to Soils	502
Solid Wastes Pollution	503
Effects of Soil Pollutants	508
Effects of Industrial Pollutants	508
Effects of Urban Waste Products	508
Effects of Radioactive Pollutants	509
Effects of Modern Agro-technology	509
Effects of Pesticides: How Pesticides Endanger Life	510
Impact of Soil-pollutants on Air Quality	510
